Tips for Shape Sorting

How to introduce:

- Show your child how to match the shapes by placing one shape in its corresponding spot on the board.
- Encourage them to imitate your actions.
- Introduce one shape at a time to prevent overwhelming your child. Once they become familiar with one shape, gradually move to the next shape.
- Stay away from distractions such as TV, phone, etc.
- Repeat the activity multiple times to reinforce the learning. Make it a part of your child's routine.
- Celebrate their efforts by praising or clapping for them.
- Remember that learning takes time, especially for young children. Be patient and supportive as your child develops their understanding of shapes.

Ways to play:

- Introduce the concept of colors by asking your child to match the shapes based on their colors.
- Make a connection between the shapes in the board to objects in the child's environment. For Example: A ball looks like a circle.
- Use rhymes to help your little one learn about shapes. For example:

  “Square has 4 sides and 4 points,
  Triangle has 3 sides and 3 points,
  Circle is round and has no points,
  Oval is a circle which is longer from one side,
  Heart has 2 bumps and 1 point,
  Star has 5 points and it shines”.
